

the limu company

making a difference

To Whom It May Concern:

This letter is being written to commend Access Technology Solutions for the innovative services they have created to run a Not-For-Resale (NFR) program in Japan.

When The Limu Company wanted to enter the Japanese market, we didn't feel that we could get there for several years because of the anticipated cost and intricacies of doing business in Japan.

Access helped us successfully introduce our Japanese NFR program in November 2004, using their NFR-In-A-Box program. Once the decision was made to move forward, it took less than 90 days to launch our Japan NFR program. After we were introduced to Access, we researched their capabilities and concluded that they had a turn-key package.

Their unique solutions were able to provide us with Japanese payment systems for product purchase as well as commission payments, customer service, electronic customs clearance, translation and event management in Japan with local representatives. The Limu Company saw the benefits of these solutions, so we went with the full NFR-In-A-Box program, and we have seen an increase in our sales.

Access Technology Solutions has been with The Limu Company every step of the way, and I can wholeheartedly recommend Access' services for the quick and economical launch of an NFR program in Japan.
